

EBC LIQUITRACE

A liquid solution with a high concentration of chelated salts, **EBC Liquitrace** is immediately available for methanogenic bacteria, rapidly stimulating biological activity and optimizing biogas production

IMMEDIATE ACTION FOR A BIOGAS WITHOUT INTERRUPTIONS!

IDEAL FOR PLANTS WITH PRE-FEED TANK, IT INTERVENES PROMPTLY IN CASE OF IMBALANCES OR DROPS IN YIELD.

RAPID ABSORPTION FOR IMMEDIATE AND LONG-LASTING RESULTS

THE ENERGY YOUR BACTERIA WERE WAITING FOR !

STABILIZES THE PROCESS AND PREVENTS FERMENTATION BLOCKS

EASY TO APPLY DIRECTLY INTO THE FERMENTATION SYSTEM OR PRE-FEED TANK

EBC LIQUITRACE

DESCRIPTION

A complete solution:

concentrated trace elements that help recover production immediately in the event of poor production or acidosis.

EBC Liquitrace is a liquid product for biogas plants with pre-feed tanks.

PRESCRIPTION

EBC Liquitrace is a customised product whose production process includes the following steps:

- Analytical evaluation and professional consulting service provided by *EBC Energy Inc.* biologists to identify critical deficiencies that can affect the process
- Formulation of an **EBC Liquitrace** supplementation plant, which may consist of:
 - Supplementation of one or more elements to solve the detected deficiency in one go
 - Quarterly, six-monthly, or yearly supplementation plan with weekly doses
 - Supplementation in one go and subsequent yearly maintenance with weekly doses
 - Quarterly inspection of the concentrations to confirm or change the formulation

DOSAGE

The recommended dose is 0.5 gal (2 l)/day every 1 MW

AVAILABLE SIZES

Available in 6.5 gal (24.6 l) drums

The chelated salts are immediately available for methanogenic bacteria.

Being a liquid product, it can be introduced directly in the fermentation system, pre-feed tank, or directly on the biomass.
